

One-Day Training Workshop on Structural Equation Modeling

On May 04, 2024, the Office of Research, Innovation, and Commercialization (ORIC) at IMSciences organized a one-day training workshop on Structural Equation Modeling (SEM) for PhD and MS students. The workshop aimed to equip participants with practical knowledge and skills in applying SEM, a powerful statistical technique used to analyze complex relationships between variables.

Expert Dr. Usman Anwar Baig led the workshop, sharing his expertise and providing hands-on training to participants. Through a combination of lectures, discussions, and practical exercises, students gained a deeper understanding of SEM's implementation in research and its applications across various fields.

The workshop provided a valuable opportunity for students to enhance their research skills and engage with experts in the field. IMSciences remains committed to supporting research excellence and providing innovative learning experiences for its students.
